

# We are pleased to share another *wonderful success story from Churchman Village!*

**Name:** Pamela Schweiger  
**Admitting Diagnosis:** Respiratory Failure

**Admission Date:** February 17, 2017  
**Discharge Date:** March 9, 2017  
**Discharge Location:** Home with home health

Ms. Schweiger admitted to Churchman Village with pneumonia and acute renal failure. Before coming to Churchman Village, she lived with her spouse in a two-story house and received assistance from her husband with all activities of daily living and functional mobility.

At Churchman Village, Ms. Schweiger completed physical and occupational therapy five to seven times per week. She needed moderate to extensive assistance upon admission. At the end of her stay, Ms. Schweiger was independent with most functional mobility and self-care tasks using a rolling walker. She was also able to ambulate short distances without any assistive device. Pamela was thrilled with her progress because she can now perform more activities of daily living than before she arrived!
